

FOR IMMEDIATE RELEASE

Oxford University Division of Structural Biology (STRUBI) Renews Commitment to Mirapoint Message Server™ Email Platform

LONDON, UK – November 2, 2011 – Critical Path, a leading provider of messaging software and services, today announced that Oxford University's Division of Structural Biology (STRUBI) has renewed their commitment to Mirapoint Message Server™ as the department's email platform.

The scientists at STRUBI conduct sophisticated research on proteins and other biomolecules – how they work and how they can be controlled for the benefit of human health. With Mirapoint Message Server, STRUBI will be able to continue to support the department's email platform, which generates millions of messages relating to their research activities. The superior performance, scalability, simplicity of management and competitive cost of ownership of the platform, gives STRUBI the autonomy and flexibility they need to be able to efficiently, reliably and securely provide the messaging service required for internationally competitive research and collaboration.

“To a research team with demanding needs, an email platform is a mission critical service. Mirapoint Message Server gives us the performance and control we need in an easy to use and manage, but above all else, stable email platform,” said Jon Diprose, Head of Scientific Computing at STRUBI. “As our incumbent platform for the last seven years, the reliability of Mirapoint Message Server has been repeatedly demonstrated, and we have every confidence that it will continue to deliver the stable and secure email platform that our users love.”

Mirapoint Message Server Solution

Mirapoint Message Server™ is a solid foundation for a secure messaging infrastructure, providing a standards-based platform that intelligently serves, secures and manages messages with multi-mode client access. The Mirapoint Message Server offers the best price-performance and the scalability to handle the most demanding email environments. For more information on Mirapoint Message Server please visit <http://www.mirapoint.com>.

Peter Stevenson, Director of Critical Path's Mirapoint business in Europe commented, “STRUBI has demanding requirements around performance, reliability and control of their email platform. For the past seven years, STRUBI has been a valued customer and partner and we have demonstrated that we can meet the requirements and expectations of their users. We are delighted they have renewed their commitment to our platform and that we will continue to provide the critical email service so relied upon by this prestigious team.”

About Oxford University's Division of Structural Biology (STRUBI)

The Division of Structural Biology (STRUBI) is part of the Nuffield Department of Clinical Medicine at the University of Oxford. STRUBI is also part of the Wellcome Trust Centre for Human Genetics. The Division includes the Oxford Protein Production Facility and the Oxford Particle Imaging Centre.

About Critical Path, Inc.

Critical Path's extensive portfolio of applications and services enable millions of people to communicate, connect, share and organize while providing industry-leading safety and assurance. Consumer solutions for online communication and social networking are delivered to leading service providers under the Memova® brand for white-label applications, and directly to consumers as the award-winning "ShoZu" service. The world's largest enterprises choose messaging, safety and assurance solutions delivered under the Mirapoint brand. With offices around the globe, Critical Path supports companies with their deployments of Memova, ShoZu and Mirapoint solutions to drive revenue, boost loyalty, streamline operations and reduce costs.
